

NETWORK INTEGRITY SERVICES

Corprotex

Next generation software for today's business challenges

Highlights

Solution

A simple, comprehensive centralised ERP solution from Mamut

Benefits

Reduced manual workload on order processing, better visibility of management information, single point of control for data, online access for customers

Technologies

Mamut, Microsoft Windows Server

“Mamut is easy to use and manage, which makes it ideal for businesses like ours. With NIS, we built a solution that precisely meets our needs.”

Paul Smith
Managing Director
Corprotex

Established in 1994, Corprotex has grown to become a leading supplier of corporate clothing for a wide range of industries – from hotel chains and banks to county cricket and Premiership football teams.

Serving blue-chip clients, Corprotex needs the ability and capacity to deliver large orders within tight time-frames. However, manual processes linking sales orders, manufacturing and finance were not able to cope with fluctuations in workload and volumes, and Corprotex was not satisfied with its own performance.

Working closely with Networking Integrity Services, Corprotex chose to invest in Mamut software to automate and integrate its business processes, enhancing the ability to respond flexibly, rapidly and cost-effectively to its customers' needs.

“As our business grew, we were starting to win contracts to deliver several thousand uniforms at a time, in a variety of styles, sizes and colours,” comments Paul Smith, Managing Director of Corprotex. “Entering all the details into our order management system was time-consuming – and the same data then had to be re-keyed into our accounting system. We wanted a single system that could handle everything, and automate these manual processes.”

NETWORK INTEGRITY SERVICES

Corprotex decided to implement Mamut, an ERP solution that integrates accounting, sales, stock control, customer relationship management, reporting and e-commerce. Network Integrity Services (NIS) helped Corprotex install the software, design the architecture and train the end-users.

“Mamut is easy to use and manage, which makes it ideal for businesses like ours that don’t have a large in-house IT team,” says Paul Smith. “By working closely with NIS, we built a solution that precisely meets our business needs.”

As well as managing the company’s core processes, Mamut also provides a web-based, graphical dashboard that displays key management information on a single screen, giving users an instant overview of sales, stock levels, cash-flow and other financial and operational data.

“With one central point of control for all our business data, we have much better visibility of how the company is performing; if there are any problems, we can respond to them instantly.”

Paul Smith
Managing Director
Corprotex

“With one central point of control for all our business data, we have much better visibility of how the company is performing; if there are any problems, we can respond to them instantly,” says Paul Smith. “There is also much less risk of errors and inconsistencies, because all the data is managed in a single place.”

As a next step, Corprotex plans to use Mamut to create an online ordering portal, which will allow customers to enter their orders directly into the system. Corprotex will also take advantage of Mamut’s mobile capability to empower its remote workforce in a secure manner. This will allow staff to work smarter by completing tasks in real time from anywhere in the world.

“Recently we received 4,000 orders from one of our customers, and it took a month to process them all,” comments Paul Smith. “The online portal will automate the ordering process, so we can spend more time on more valuable activities such as product design and customer service.”
